

Technology Stack - OptiCrop

Project: OptiCrop – Smart Agricultural Production Optimization Engine

S.No	Component	Technology	Justification
1	Frontend	HTML, CSS, Bootstrap	Responsive and simple interface for farmers.
2	Backend	Python, Flask	Lightweight framework for ML integration.
3	Database	SQLite	Stores user data and prediction history efficiently.
4	Cloud/Hosting	Render / PythonAnywhere	Easy deployment and free hosting.
5	Version Control	Git & GitHub	Code management and collaboration.
6	Third-Party APIs	OpenWeatherMap API	Provides weather data for accurate crop recommendations.
